### Labour-saving automation and occupational exposure: a text-similarity measure

Fabio Montobbio<sup>a b</sup> Jacopo Staccioli<sup>a c</sup> Maria Enrica Virgillito<sup>c a</sup> Marco Vivarelli<sup>a c</sup>

> <sup>a</sup> Department of Economic Policy, Università Cattolica del Sacro Cuore, Milano <sup>b</sup> BRICK, Collegio Carlo Alberto, Torino <sup>c</sup> Institute of Economics, Scuola Superiore Sant'Anna, Pisa

#### Context

- the impact of automation upon employment has become a major topic of discussion both in policy and academic debate
  - Brynjolfsson and McAfee (2011, 2014) the root of current unemployment is not the Great Recession, but rather a 'Great Restructuring' characterised by an exponential growth in computers' processing power having an ever-bigger impact on jobs, skills, and the whole economy ("This time is different")
  - Frey and Osborne (2017) 47% of the occupational categories are at high risk of being automated, including services and highly cognitive jobs
  - Acemoglu and Autor (2011) technology destroys occupation in the middle part of the wage distribution substituting repetitive and routinised tasks

### **Existing literature**

- a few proxies have been used to measure the impact of technology on the labour market
  - share of computers in sectors of belonging (Autor, Levy, Murnane, 2003)
  - share of robots in sectors of belonging (Acemoglu and Restrepo, 2020)
  - automation probability constructed via Delphi method (experts judgment) and classifier systems (Arntz et al., 2016; Frey and Osborne, 2017; Nedelkoska and Quintini, 2018)

- these are all *indirect* measures which might confound firms and industry attributes and heterogeneous technological artefacts
- a more *direct* machine-task mapping is still missing

## **Existing literature (cont'd)**

Webb (2020) proposes a direct measure of exposure via co-occurrence of verb-noun pairs in the title of AI patents and O\*NET tasks
Felten et al. (2021) links the Electronic Frontier Foundation dataset with O\*NET abilities
Acemoglu et al. (2020) looks at AI exposed establishments (Webb, 2020, Felten et al., 2021) and their job posts using Burning Glass Technologies data
Meindl et al. (2021) matches the patent text corpus with the O\*NET detailed work activities

Kogan et al. (2021) constructs a text-similarity measure between a corpus of breakthrough innovations (Kelly et al., 2018) and the Dictionary of Occupation Titles (DOT)

# **Objective of the paper**

- build a *direct* measure of occupational exposure to labour-saving technologies
- 3-fold analysis
  - 1 labour-market (employment and wage)
  - 2 sectoral
  - 3 geographic
- to study the machine-task relationship we need to look at functions and operations of both machines, in relation to humans, and humans themselves
- functions and operations are better described in CPC definitions than in patents full-text
- tasks executed by humans are well described in the O\*NET questionnaire
- technological classification codes allow us to pinpoint truly labour-saving tasks

## **Our starting point**

Montobbio et al. (2022)<sup>1</sup> identify labour-saving patents among USPTO robotic applications (2009–2018)

- robotics patents identified by CPC and keyword search (10 × 'robots')
- 2 labour-saving patents identified by text query
   →
   and manual validation (no false positives)
- 1,276 truly labour-saving patents

<sup>&</sup>lt;sup>1</sup>Montobbio, F., J. Staccioli, M. E. Virgillito, and M. Vivarelli (2022) "Robots and the origin of their labour-saving impact". *Technological Forecasting and Social Change* 174, 121122. DOI: 10.1016/j.techfore.2021.121122

## **Examples of labour-saving patents**

"Automated systems, such as robotic systems, are used in a variety of industries to **reduce labo[u]r costs and/or increase productivity**. Additionally, the use of human operators can involve increased cost relative to automated systems." [US20170178485A1]

"The use of [robotic] technology results in improved management of information, services, and data, increased efficiency, significant reduction of time, **decreased manpower requirements**, and substantial cost savings." [US20100223134A1]

#### **Flowchart**

### **Occupations and labour-saving patents**

• we compute a text similarity measure between technological codes and tasks

#### **CPC corpus**

- technological definitions from CPC v. 2019.08
- 671 4-digit CPC codes

#### **Task-Occupation corpus**

- tasks description from O\*NET v.25.1
- 19,231 tasks mapped to 923 8-digit SOC2018 occupations

preprocessing: every piece of text is tokenised, stemmed, and stop words are removed

#### **Document-term matrix**

**1** construct the *document-term matrix*  $\mathcal{D}_{CPC}$  of the corpus *D* of CPC definitions

- each cell contains the corresponding tf-idf product
- tf: term frequency, i.e. the number of times that term *t* occurs in document *d*
- idf: inverse document frequency, i.e., it is a measure of how much information the word provides (if it's common or rare across all documents)

$$\begin{aligned} \mathsf{tf}\text{-}\mathsf{idf}(t,d,D) &:= \mathsf{tf}(t,d) \cdot \mathsf{idf}(t,D) \\ \mathsf{tf}(t,d) &:= \mathbf{1}_d(t) = \begin{cases} 1 & \text{if } t \in d \\ 0 & \text{otherwise} \end{cases} \\ \mathsf{idf}(t,D) &:= \mathsf{log}\left(\frac{|D|}{|\{d \in D : t \in d\}|}\right) \end{aligned}$$

•  $671_{CPCs} \times 2309_{terms}$  matrix

- **2** construct the *document-term matrix*  $\mathcal{D}_{ONET}$  of the corpus of task descriptions
  - projected on the *vocabulary* of the CPC matrix  $\mathcal{D}_{CPC}$
  - 19231<sub>Tasks</sub> × 2309<sub>terms</sub> matrix

#### **Cosine similarity**

- 3 construct the cosine similarity (CS) measure between the two corpora
  - for each couple of row vectors  $X \in \mathcal{D}_{CPC}, Y \in \mathcal{D}_{ONET}$   $(X, Y \in \mathbb{R}^{2309}_+)$

$$\cos(X, Y) := \frac{X \cdot Y}{\|X\| \|Y\|} = \frac{\sum_t x_t y_t}{\sqrt{\sum_t x_t^2} \sqrt{\sum_t y_t^2}}$$

- $cos(X, Y) \in [0, 1]$  since vectors X and Y are non-negative valued
- w.r.t. Euclidean distance, cosine similarity normalises for varying lengths of documents
- 671 × 19231 cosine similarity matrix
- each task obtains a similarity score to each CPC code (12,904,001 pairs)

# **Cosine similarity (cont'd)**

OCCUPATION	11-1011.00		11-1011.00			53-7121.00	
TASK	8823	8824			12809	12810	
СРС							
A01B	cos(A01B,8823)	cos(A01B,8824)			cos(A01B,12809)	cos(A01B,12810)	
A01D	cos(A01D,8823)	cos(A01D,8824)			cos(A01D,12809)	cos(A01D,12810)	
H05H	cos(H05H,8823)	cos(H05H,8824)			cos(H05H,12809)	cos(H05H,12810)	
H05K	cos(H05K,8823)	cos(H05K,8824)			cos(H05K,12809)	cos(H05K,12810)	

4 weigh by CPC frequency in LS patents<sup>2</sup>

**5** sum across CPCs, and rescale between [0,1]

 $<sup>^2 \</sup>text{codes}$  B25\*, G01\*, G05\*, G06\*, and Y\* are excluded because too general

#### From tasks to occupations

- each O\*NET occupation consists of a number of core and supplemental tasks
- we attribute task CS to occupations with weights

core :  $\frac{2/3}{\# \text{ tasks in the occupation}}$ supplemental :  $\frac{1/3}{\# \text{ tasks in the occupation}}$ 

 this weighting scheme reflects O\*NET cutoff between core and supplemental tasks (based on a blend of *frequency*, *importance*, and *relevance* to underlying occupation)

### **#** Tasks by similarity

# **Top tasks by similarity**

#	Code	Description	CS
1	14587	Load materials and products into machines and equipment, or onto conveyors, using hand tools and moving devices	1.0
2	3202	Move levers or controls that operate lifting devices, such as forklifts, lift beams with swivel-hooks, hoists, or elevating platforms, to load, unload, transport, or stack material	0.96
3	3203	Position lifting devices under, over, or around loaded pallets, skids, or boxes and secure material or prod- ucts for transport to designated areas	0.9
4	17928	Lift and move loads, using cranes, hoists, and rigging, to install or repair hydroelectric system equipment or infrastructure	0.89
5	15266	Manually or mechanically load or unload materials from pallets, skids, platforms, cars, lifting devices, or other transport vehicles	0.88
6	14584	Remove materials and products from machines and equipment, and place them in boxes, trucks or con- veyors, using hand tools and moving devices	0.86
7	11839	Transport machine parts, tools, equipment, and other material between work areas and storage, using cranes, hoists, or dollies	0.85
8	3217	Load materials and products into package processing equipment	0.85
9	12805	Operate conveyors and equipment to transfer grain or other materials from transportation vehicles	0.85
10	12323	Communicate with systems operators to regulate and coordinate line voltages and transmission loads and frequencies	0.84

# **# Occupations by similarity**

# **Top occupations by similarity**

#	Code	Title	CS
1	53-7051.00	Industrial Truck and Tractor Operators	1.0
2	49-9043.00	Maintenance Workers, Machinery	0.97
3	53-7063.00	Machine Feeders and Offbearers	0.94
4	53-7064.00	Packers and Packagers, Hand	0.91
5	49-2091.00	Avionics Technicians	0.87
6	51-9111.00	Packaging and Filling Machine Operators and Tenders	0.81
7	49-3041.00	Farm Equipment Mechanics and Service Technicians	0.81
8	49-3092.00	Recreational Vehicle Service Technicians	0.78
9	49-3042.00	Mobile Heavy Equipment Mechanics, Except Engines	0.77

15	51-9191.00	Adhesive Bonding Machine Operators and Tenders	0.75
16	51-9023.00	Mixing and Blending Machine Setters, Operators, and Tenders	0.74
17	13-1032.00	Insurance Appraisers, Auto Damage	0.73
18	51-4111.00	Tool and Die Makers	0.73
19	49-9081.00	Wind Turbine Service Technicians	0.72
20	51-8013.04	Hydroelectric Plant Technicians	0.72

## **Occupational exposure and employment**

- match with Occupational Employment Statistics (OES) from US Bureau of Labor Statistics
- employment (excluding self-employed) and median wage data for 6-digit SOC occupations

2019 for levels1999 for 20-year growth rates

### Wage levels and employment growth

■ robust LOWESS estimates of the underlying scatter plots (bandwidth = 0.8)

#### Sectoral exposure

Rank	NAICS 2-digit	CS
1	Manufacturing	1.0
2	Health care and social assistance	0.39
3	Education services	0.33
4	Construction	0.30
5	Public administration	0.21
		• • •
16	Mining	0.06
17	Finance and insurance	0.05
18	Agriculture, forestry, fishing and hunting	0.04
19	Real estate and rental and leasing	0.02
20	Management of Companies and Enterprises	0.00

Table: Weighted average of similarity and occupation membership to the underlying sector (O\*NET)  $% \left( O^{*}\mathsf{NET}\right) =0$ 

## **Geographic exposure (continental US)**

Figure: State-level disaggregation of the exposed occupations (top 10% of CS)

#### Discussion

- the cosine similarity matrix is overall very *sparse* 
  - skewed distributions in both tasks and occupations
  - high similarity is a rare event (low probability of false positives)
- considering the top decile of the similarity distribution, around 8.6% of employees (≈12.6m) are exposed to substitution
- we do not know how many workers a single machine is able to substitute

## **Discussion (cont'd)**

- exposure to substitution is monotonically decreasing in wage
  - no U-shaped pattern but rather a negative declining relationship
- most affected occupations (2-digit) include "transportation and material moving" (logistics), "installation, maintenance, and repair" (automotive), "food preparation and serving"
- exposure to substitution is decreasing in employment growth
  - innovative efforts towards the weakest and cheapest segment of the labour market
- the most affected sector is manufacturing, but health and education services rank high
  - suggests pervasiveness of exposure to labour-saving technologies
- geographic divide between US coasts and inland (Rust Belt and Southern states)
   most exposed areas have higher prevalence of non-white communities

#### **Future developments**

- extend to overall labour-saving technologies (beyond robotics)
- investigate of determinants of employment change
  - wage vs. technological exposure
- characterise labour-saving robotic patents in terms of quality and innovative content
  - since innovative efforts are devoted to substitute cheap labour

### Patent-O\*NET match: top tasks by similarity

#	Code	Description	CS
1	16596	Build or assemble robotic devices or systems	1.0
2	11944	Set up and operate computer-controlled machines or robots to perform one or more machine functions on metal or plastic workpieces	0.98
3	21057	Build, configure, or test robots or robotic applications	0.97
4	16523	Conduct research on robotic technology to create new robotic systems or system capabilities	0.93
5	16511	Provide technical support for robotic systems	0.91
6	16587	Assist engineers in the design, configuration, or application of robotic systems	0.86
7	16525	Conduct research into the feasibility, design, operation, or performance of robotic mechanisms, com- ponents, or systems, such as planetary rovers, multiple mobile robots, reconfigurable robots, or man- machine interactions	0.84
8	16593	Install, program, or repair programmable controllers, robot controllers, end-of-arm tools, or conveyors	0.81
9	16584	Modify computer-controlled robot movements	0.8
10	16579	Maintain service records of robotic equipment or automated production systems	0.8
